Featured Product from Duoyuan: Anhydrous Lanolin EP ELP Gardner 7

Anhydrous Lanolin EP ELP Gardner 7 is produced from the multi-stage refining of wool grease, a natural, renewable raw material, which is obtained from the scouring of raw wool. The product meets the requirements of European Pharmacopoeia and any existing national requirements for pesticide residues.

The product's pesticide residue and color is controlled in a very low level which makes it suitable to use in the low hypersensitive product and pharmaceutical applications such as lip care and baby care products.

Nanjing Duoyuan Biochemistry Co.,Ltd .can meet different needs of many customers according to their different special requirements and updated standards as we communicate with customers profoundly. And we have successfully developed very-low gardner lanolin which meets EP standard, become one of the few manufactures which can produce low gardner lanolin among the world. In the meantime, we also keep expanding lanolin derivative products, enlarging the products scale. And strive to make itself become one of the most advanced global suppliers of high-quality personal care ingredients.
