## **McKinley Resources expands options for natural skin care & cosmetic ingredients**

*from McKinley Resources, Inc. – April 2016*

McKinley Resources recognizes the continuous consumer trend toward a preference for natural skin care and cosmetic ingredients. In light of this trend, the company is continuously expanding its product portfolio in order to offer customers ingredients that align with consumer demand.

McKinley currently offers the WORESANA® 100% natural active ingredient system from rye ferment. This system contains a broad spectrum of ingredients such as amino acids, anti-oxidants, pantothenic acid, beta glucan, nicotinamide and more. Key benefits of WORESANA® are: antibacterial, antifungal and anti-acne. This product line can be used for skin, nail and hair care applications. In addition to WORESANA®, McKinley now offers 18-β Glycyrrhetic Acid and L-Erythrulose.

### **18-β Glycyrrhetic Acid**

18-β Glycyrrhetic Acid is isolated from licorice root and possesses anti-inflammatory properties that provide natural skin soothing benefits. This ingredient can be used for applications such as after-sun care, after shave and more.

### **L-Erythrulose (ECOCERT)**

L-Erythrulose is a natural keto-sugar used in sunless tanning cosmetics. With the increased consumer awareness of the dangers of UV rays from the sun and indoor tanning beds, sunless tanning products have become more desirable. Erythrulose sunless tanning helps reduce the skin cancer risk, cellular damage and premature aging associated with traditional tanning due to UV exposure. Erythrulose also helps avoid streaking and drying effects caused by other sunless tanning products such as dihydroxyacetone (DHA).

For more information, visit McKinley at NYSCC Supplier's Day May 10-11<sup>th</sup> at **Booth 102** or email [info@mckinleyresources.com](mailto:info@mckinleyresources.com).
