## **SABINSA TO FEATURE LACTOSPORE AT NEW YORK SOCIETY OF COSMETIC CHEMISTS SUPPLIERS' DAY**

**Booth # 1246**

**East Windsor, NJ (April 28, 2016)** – Sabinsa’s scientists will be available in booth #1246 to discuss in detail the science behind the company’s cutting edge ingredients, with particular emphasis on the popular shelf-stable probiotic LactoSpore<sup>®</sup>, at the New York Society of Cosmetic Chemists Suppliers’ Day tradeshow May 10<sup>th</sup> and 11<sup>th</sup>, 2016, New Jersey Convention and Exposition Center in Edison, NJ.

Sabinsa’s shelf stable microbial preparation from *Lactobacillus sporogenes* (*Bacillus coagulans*, MTCC 5856) has self-affirmed GRAS status and is found in a vast number of functional foods and dietary supplements. While the benefits of probiotics when ingested is well-known, the hottest new application is as a topical. Probiotics play an essential role in skin care, which has been clinically established through recent studies. LactoSpore has been incorporated successfully for supporting healthy skin topically in products such as soaps. While it imparts a positive effect on skin by modulating mechanisms related to the immune system, it also provides benefits for atopic conditions by restoring residential and beneficial skin microflora. (Majeed M et al., 2015. *EuroCosmetics* 10-11)

“Last year at this show we spoke with chemists, R&D scientists, purchasing agents and top management about Sabinsa’s ingredients, most of whom had a high level of science knowledge,” Kavita Subramanian, Sr. Manager International Business. “We look forward to again having in-depth conversations about Sabinsa’s cutting-edge developments in natural cosmetic ingredients.”

### **About Sabinsa Corporation:**

Sabinsa's mission is to provide alternative and complementary natural products for human nutrition and well-being. Over the past 27 years, Sabinsa has brought to market more than 100 standardized botanical extracts, and privately funded clinical studies in conjunction with prestigious institutions in support of these products. With more than 100 full-time scientists conducting ongoing research in India and the United States, Sabinsa and parent company Sami Labs Ltd. continue to develop, patent and manufacture phytonutrients for the world market, with ingredients that are both Halal and Kosher.
