EASY TO CLEAN COATINGS WEBINAR

OUTLINE

- Common Stains for Architectural/Construction Coatings
- Functional Silicones Introduction
- Momentive Functional Silicones for Easy-to-Clean Coatings:
 - Waterborne Acrylic
 - Solvent-borne Polyurethane
 - Water-borne Polyurethane

COMMON STAINS FOR ARCHITECTURAL/CONSTRUCTION COATINGS

ROUTES TO HELP ACHIEVE EASY-TO-CLEAN COATINGS

RESIN/BINDER	FORMULATION	ADDITIVES
 Organic: Acrylic, PU, etc. Inorganic: Silicone, Silicate 	FillersPigments	SiliconesWax
Hybrid: Organic-Silicone	 Photoactive (self- cleaning) 	Fluoro surfactantsFluoro Silicones

- Complete Formulation Optimization is Needed to Achieve Easy to Clean Coatings.
- Functionality of a Silicone can be Selected Based on Target Properties of a Target Formulation.

Product formulations are included as illustrative examples only. Momentive makes no representation or warranty of any kind with respect to any such formulations, including, without limitations, concerning the efficacy or safety of any product manufactured using such formulations.

MOMENTIVE SOLUTIONS FOR WATERBORNE ACRYLIC PAINTS

EASY TO CLEAN COATINGS WEBINAR

AGENDA

CoatOSil™ CLEAN Silicone

- Key Features
- How Does It Work
- Applications And Tests
- Summary

Key Features

- Low viscosity emulsion of functional silicone
- Lower VOC; Lower cyclics
 - < 7g/L VOC, ASTM D2369
 - < 1000 ppm D4, D5, D6
- Typical properties
 - White opaque liquid
 - ~45% solids
 - Low viscosity (< 400 cp at 25°C)
 - Particle Size: ~300 nm
- Compatible with acrylic latex

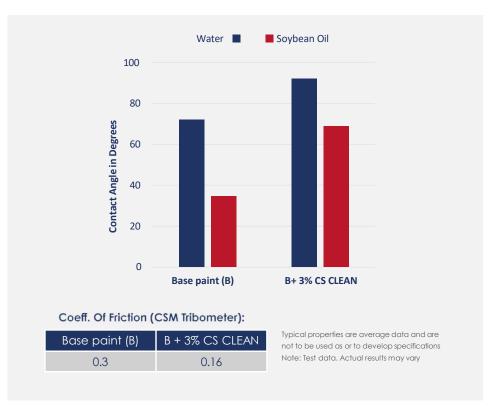

Unique molecular design to achieve optimal properties Compatibility Surface energy Coefficient of Friction Durability (anchoring groups) Low friction Low surface energy Least polar Resin

CoatOSil CLEAN increased both Hydrophobicity and Oleophobicity, and reduced Coefficient of Friction.

Dynamic Contact Angle Measurement F

Typical Benefits

- Scuff resistance
- Stain resistance
- Anti-blocking
- Reduced surfactant leaching
- Compatible with a wide range of latex systems

Superior block resistance

Summary

- Excellent Compatibility With Waterborne Coatings:
 - Easy to use as a blend or post-add in most WB systems
 - < 1000 ppm D4, D5, D6
- Typical Performance Benefits:
 - Scuff resistance
 - Stain resistance
 - Anti-blocking
 - Reduced surfactant leaching
- Virtually No Negative Effect on Adhesion, Recoatability, or Gloss

MOMENTIVE SOLUTIONS FOR SOLVENT-BASED **POLYURETHANE COATINGS**

TSCA Registration In Progress

SOLVENT-BORNE 2K PU COATINGS
Y-19577 SILICONE

Introduction

Y-19577, a reactive silicone additive, is an excellent candidate for solvent-borne 2K Polyurethane/Polyaspartic coatings. It can help provide durable anti-graffiti properties (easy to remove).

Potential Applications and Benefits

As Anti-graffiti additive (1-10 wt%) in 2K SB PU coatings:

- Good compatibility
- Excellent graffiti removal property
- Excellent anti-sticker property
- Improved UV resistance
- Improved flexibility

Typical Physical Properties

Property	Value	
Active content	~100 wt%	
Appearance	Pale yellow liquid	
Viscosity, 25°C	70 cp	
Density, 25°C	1.01 g/ml	
Solvent pH, 25°C	11	

Typical properties are average data and are not to be used as or to develop specifications

TSCA Registration In Progress

SOLVENT-BORNE 2K PU COATINGS
Y-19577 SILICONE

Various silicone additives (3 wt.%) mixed with acrylic polyol solution (w/o pigments)

Transparency/haze of silicone modified polyacrylate polyols cured with polyisocyanate activator

- Sillicone fluid modified acrylic polyols are typically hazy/ opaque liquids
- Y-19577 is miscible with acrylic polyol up to 5 wt.% loading
- Y-19577 modified polyacrylates yield transparent films upon crosslinking with aliphatic polyisocyanates

Typical Physical Properties

	Amount (wt%)		
Ingredient	Control	With Additive	
PART A:			
Commercial white topcoat	66.7	61.2	
Silicone Additive	-	5.5	
PART B:			
Polyisocyanate crosslinker	33.3	33.3	
Total	100	33.3	

Product formulations are included as illustrative examples only. Momentive makes no representation or warranty of any kind with respect to any such formulations, including, without limitations, concerning the efficacy or safety of any product manufactured using such formulations.

Coating Application

- Metal substrates cleaned by wiping with paper cloth and immersed in Xylene and IPA.
- Coatings spray applied at 2.5 bar pressure using 1.4 mm nozzle.
- Target dry film thickness ~60-70 microns.
- Coatings cured for 14 days at room temperature.

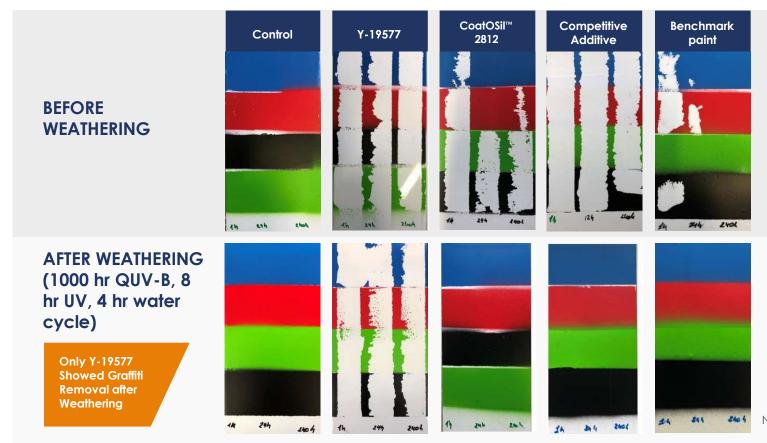

Graffiti Type and Application

- Single pass of graffiti applied on coated panels
- Graffiti removal tested after 24, 120 and 240 hrs

ANTI-GRAFFITI TESTING: TAPE PULL METHOD

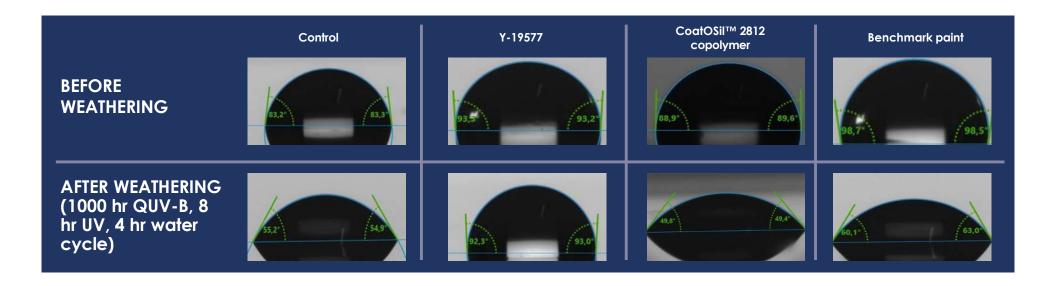

Note: Test data. Actual results may vary.

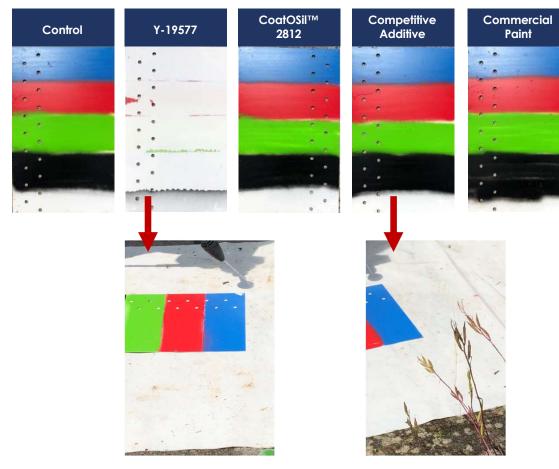

SOLVENT-BORNE 2K PU COATINGS WATER CONTACT ANGLE

Only Y-19577 Retained Water Contact Angle after Weathering

ANTI-GRAFFITI TESTING USING PRESSURE WATER

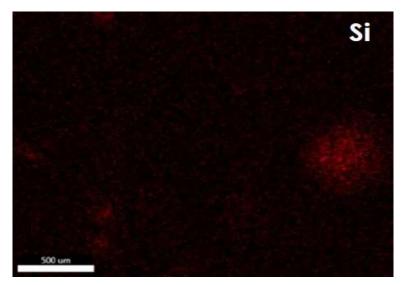

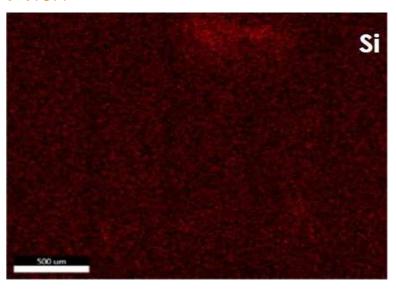

Karcher High Pressure Cleaner (60-80 bar, no detergent)

Only Y-19577 showed Complete Removal of Graffiti

Control

Y-19577

Excellent Distribution of Si throughout the Surface of Film

Scanning electron microscopy (SEM) and energy dispersive X-ray spectroscopy (EDS)

SEM-EDS analysis was done using Zeiss EVO-18 Scanning Electron Microscope, fitted with EDAX Element Z2e system from Ametek. SEM imaging was done in high vacuum with 15 kV accelerating voltage, working distance of 8.5-9.5 mm and probe current of 100-300 Pa. Samples were prepared by cutting the coated metal plates into 1X1' squares and attaching to the stage using carbon adhesive tape. Samples were sputter coated with gold at 10 mA for 90 sec to obtain a conductive surface to prevent charging of the sample. EDS elemental maps were acquired at a magnification of 10,000X.

Note: Test data. Actual results may vary.

Y-19577 also improved Impact Resistance, Adhesion, Chemical resistance and UV Stability (gloss and surface energy retention) VERSATILE FUNCTIONAL ADDITIVE TO IMPROVE SURFACE AND BULK PROPERTIES

EASY TO CLEAN COATINGS WEBINAR SUMMARY

Y-19577 Silicone

- Y-19577 silicone provides 2K solvent based polyurethane coatings with low surface energy and strong antigraffiti effect;
- Y-19577 silicone enables polyurethane coatings with improved release properties even after weathering;
- Y-19577 silicone allows formulation of polyurethane coatings with improved compatibility, mechanical properties, adhesion, chemical resistance and good shelf-life stability.

MOMENTIVE SOLUTIONS FOR **WATER-BASED POLYURETHANE** COATINGS

TSCA Registration In Progress

WATER-BASED 2K PU COATINGS
Y-19644 SILICONE

Introduction

Y-19644 silicone is a reactive silicone additive. It is compatible with water-based 2K Polyurethane coating systems and can enhance durable anti-graffiti properties (easy to remove).

Potential Applications and Benefits

As Anti-graffiti additive (1-5 wt%) in 2K WB PU coatings:

- Good compatibility with WB resins
- Excellent graffiti removal of various paints
- Improved UV durability for outdoor applications
- Improved chemical resistance

Property	Value
Active content	~100 wt%
Appearance	Pale yellow liquid
Viscosity, 25°C	125 cp
Density, 25°C	1.02 g/ml
Solvent pH, 25°C	10.8
Refractive Index	1.42

Typical properties are average data and are not to be used as or to develop specifications

TSCA Registration In Progress

Note: Test data. Actual results may vary.

PART B

POLYISOCYANATE CROSSLINKER	
Desmodur N3900, crosslinker	10.2
Butylglycol acetate, solvent	5.95
Ethyl-3-ethoxypropionate, solvent	0.85
TOTAL CROSSLINKER	17.0

Product formulations are included as illustrative examples only.

Momentive makes no representation or warranty of any kind with regard to any such formulations, including, without limitation, concerning the efficacy or safety of any product manufactured using such formulations.

TEST SYSTEM

- Release agents were incorporated by cold blending with the PART A of the topcoat paint and mixing for 48h before application.
- Standard concentration of release agent in the TOTAL RFU paint formulation was 1.5 wt.%.

APPLICATION and DRYING

- Substrates: CRS (Gardebond OC), HDG, (Gardebond OE), E-coat primedod panels, Epoxy primed panels (appearance panels).
- Cleaned by wiping with paper cloth immersed in Xylene and IPA.
- Applied by spraying, 2.5 bar, 1,4mm nz. DFT=60-70 mic.
- Dried at RT for 14 days before testing.

WATER-BASED 2K PU COATINGS

APPEARANCE AND MECHANICAL PROPERTIES

- Good compatibility of with 2K WB polyurethane paint
- No craters or orange peel
- Induction time of 48h is required to enable good compatibility of silicones with the WB paint

 All experimental systems showed good impact resistance – on PAR with the control 2K PUR topcoat and commercial 2K PU benchmark (commercial anti-graffiti paint)

Note: Test data. Actual results may vary.

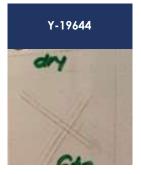

WATER-BASED 2K PU COATINGS

ADHESION & FLEXIBILITY

Dry/Wet Cross-hatch Adhesion

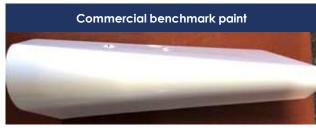

Conical Mandrel Bend Test

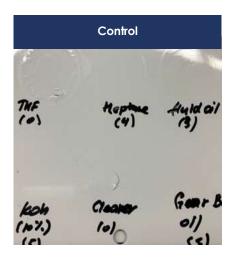

Note: Test data. Actual results may vary.

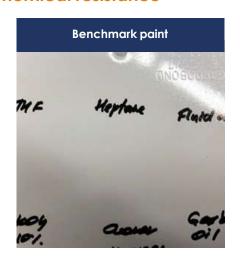

- All systems showed good bending flexibility except the 2K commercial benchmark
- Both silicone additives provide good dry adhesion.
- None of the tested systems affected wet adhesion

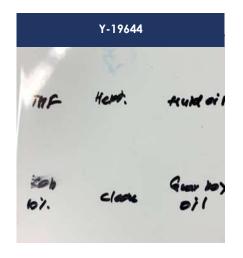

WATER-BASED 2K PU COATINGS

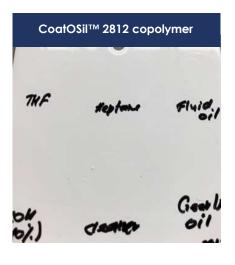

CHEMICAL RESISTANCE

Y-19644 showed excellent chemical resistance

Chemical resistance test was carried out by direct exposure of test surface to various chemicals including: THF, Heptane, Fluid oil, KOH (10%), Cleaner, Gear Box oil. Exposure time: 2h; temperature: RT.

ANTI-GRAFFITI TESTING: TAPE PULL METHOD

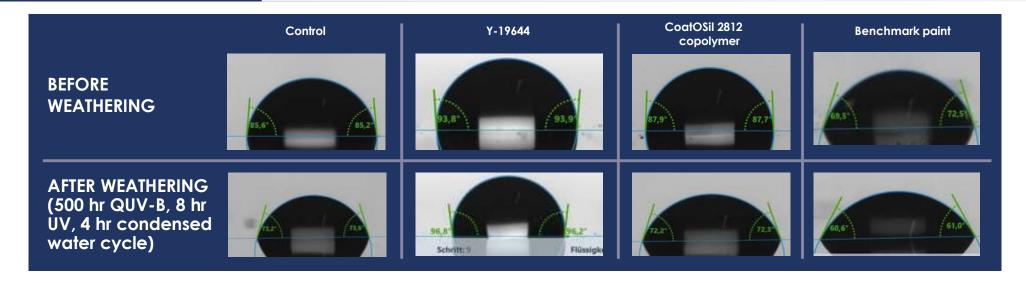

Note: Test data. Actual results may vary.

ANTI-GRAFFITI TESTING: TAPE PULL METHOD

RESULTS	CONTROL	Y-19644	Benchmark paint	CoatOSil 2812 copolymer
Total surface energy before QUV(mN/m)	33.6	25.1	45.2	31.6
Total surface energy after QUV(mN/m)	43.0	23.6	50.3	44.8
Delta	9.4	-1.5	5.1	13.2

Only Y-19644 **Retained Water Contact Angle** after Weathering

ANTI-GRAFFITI TESTING USING PRESSURE WATER

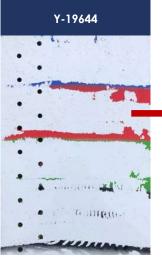

Introduction

- Application of NITRO-Anti-graffiti paint on a clean white TOPCOAT panel (60X80 cm)
- cleaning pass with Kercher high-pressure cleaner (ca.60-80 bar), no detergents

Karcher High Pressure Cleaner (60-80 bar, no detergent)

Y-19644 showed the best antigraffiti performances vs. other technologies

EASY TO CLEAN COATINGS WEBINAR SUMMARY

Y-19644 Silicone

- Y-19644 silicone is an excellent candidate for durable waterbased anti-graffiti polyurethane applications
- Y-19644 silicone has good compatibility with water-based 2K Polyurethane combined with good shelf-life stability
- Y-19644 silicone modified polyurethanes are characterized by high water contact angle, low surface energy, excellent mechanical properties and chemical resistance

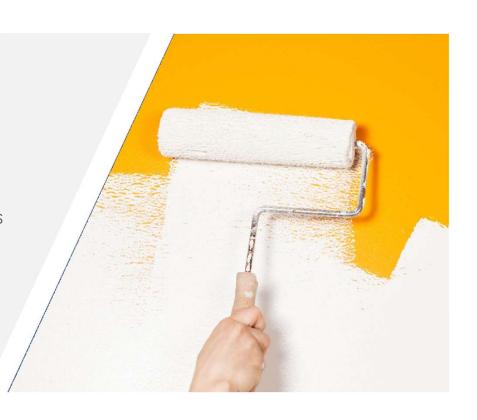

EASY TO CLEAN COATINGS WEBINAR **SUMMARY**
